Nothing Found

Your search for **+device +emulation +"virtual device object" +serial +bus** did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

Quick Tips

- Enter your search terms in [lower case](#) with a space between the terms.

sales offices

You can also enter a full question or concept in [plain language](#).

Where are the sales offices?

- Capitalize [proper nouns](#) to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a [phrase](#) in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a + if a search term [must appear](#) on a page.

museum +art

- Exclude pages by using a - if a search term [must not appear](#) on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago

1 [I/O device Emulation in The Stanford Emulation Laboratory](#)

Jerry Huck, Charles Neuhauser

November 1979 **Proceedings of the 12th annual workshop on Microprogramming**

Full text available:  [pdf\(584.35 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This report describes the implementation of an I/O device emulation system for a universal host machine, the Emmy. The actual system I/O devices are part of a PDP-11/05 system supporting the UNIX operating system. To support device emulation a process is established within this system to act as a simple I/O channel responding to host I/O requests. This channel process is able to provide three basic device structures: serial, linear and variable, which correspond roughly to character, disk-I ...

2 [Fast detection of communication patterns in distributed executions](#)

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research**

Full text available:  [pdf\(4.21 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

3 [VISA: Netstation's virtual Internet SCSI adapter](#)

Rodney Van Meter, Gregory G. Finn, Steve Hotz

October 1998 **Proceedings of the eighth international conference on Architectural support for programming languages and operating systems**, Volume 32, 33
Issue 5, 11

Full text available:  [pdf\(1.23 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper we describe the implementation of VISA, our Virtual Internet SCSI Adapter. VISA was built to evaluate the performance impact on the host operating system of using IP to communicate with peripherals, especially storage devices. We have built and benchmarked file systems on VISA-attached emulated disk drives using UDP/IP. By using IP, we expect to take advantage of its scaling characteristics and support for heterogeneous media to build large, long-lived systems. Detailed file system ...

4 [Emulation - a useful tool in the development of computer systems](#)

F. A. Salomon, D. A. Tafuri

March 1982 **Proceedings of the 15th annual symposium on Simulation**
